Professional Summary

Senior Mobile Engineer with 4+ years shipping high-scale consumer apps across Flutter, native Android (Kotlin), and native iOS (Swift/SwiftUI). Currently building brokerage, mutual fund, and payment systems at a fintech platform serving 7M+ users — raised crash-free users from 70% to 95%, built an in-house TradingView-style chart engine that lifted derivative trades ∼20%, and engineered a self-hosted OTA code-push platform saving ₹14L+ annually. Creator of Libgen (600K+ downloads, 150K+ MAU), publisher of 11 pub.dev packages. Deep expertise in performance engineering (64% cold-start reduction), payment integrations (BSE, Juspay, Razorpay), real-time systems (WebSockets, RabbitMQ), and CI/CD automation.

Technical Skills

Languages: Dart, Kotlin, Swift, Python, JavaScript
Mobile & Cross-Platform: Flutter, Android SDK, Jetpack Compose, SwiftUI, UIKit, PWA, BLE
Architecture & State: BLoC, GetX, Provider, Riverpod, MVVM, Clean Architecture, SOLID, Dependency Injection (GetIt), OOP
Networking & Real-Time: REST APIs, WebSockets, RabbitMQ, Firebase (Auth, Firestore, Realtime DB, FCM, Dynamic Links, ML Kit)
Payments & Fintech: Juspay (HyperPay, Headless), Razorpay, BSE Integration, UPI Intent/Collect, RevenueCat
Performance: Cold-Start Optimization, Memory-Leak Detection, Rendering Optimization, ProGuard/R8, Gradle Tuning, App-Size Reduction
DevOps & Testing: CI/CD, GitHub Actions, Shell Scripting, Self-Hosted OTA Code Push, Appium, Git, GitHub
Data & Tools: SQLite, Room, MySQL, OpenCV, PaddleOCR, Web Scraping, AppsFlyer, LevelPlay, Figma, IoT (ESP32)

Experience

Senior Software Engineer 04/2024 – Present
Univest Communication Pvt. Ltd. *Gurgaon, India*

Univest App — Flutter Trading & Investment Platform (9M+ Users)

- Architected brokerage order placement and order management modules for a trading platform serving 9M+ users, engineered for security, scalability, and low-latency execution.
- Integrated binary-encrypted WebSocket streaming with auto-reconnect across background/foreground transitions, ensuring secure, uninterrupted live market data.
- Drove crash-free users from 70% to 95% through systematic crash triage, stability fixes, and instant hotfix rollouts.
- Delivered the mutual fund vertical end-to-end — custom BSE headless order flow across 4 payment modes (UPI Intent, UPI Collect, net banking, cards), plus redemption, SIPs, and portfolio — processing 3K+ orders worth ₹1.06Cr+.
- Architected a plug-and-play Juspay headless payment module (UPI Intent/Collect, cards) adopted across 4 product flows — Pro, Basket, Commodity, and Mutual Funds — with minimal per-flow integration effort.
- Reduced app cold-start time from 5.5s to 2.0s (64% improvement) by restructuring the initialization pipeline and deferring non-critical resource loading.
- Cut API calls by 50% via BLoC architecture and GetIt dependency injection; trimmed app size ∼10% (6MB+ of assets) using Gradle/ProGuard tuning and custom Python asset-compression and log-stripping scripts.
- Built a CMS-driven dynamic UI system and runtime page builder composing screens from assets and ads, enabling homepage and campaign launches with zero app releases.
- Developed a dynamic ads widget (Lottie, GIF, image, and countdown-timer creatives) with silent-ad handlers executing deep links, bottom sheets, and API actions in the background without interrupting users.
- Implemented a custom cross-platform dynamic-linking system with backend and web teams, and integrated AppsFlyer OneLink for event tracking and install-conversion attribution.

Scalper — In-House Charting & Trading Terminal

- Built a TradingView-style chart engine from scratch in under a month — custom indicators, drawing tools, pattern recognition, and real-time rendering — growing derivative trade share by 12%.

- Shipped Scalper 2.0 (trade-from-chart): on-chart average position, stop-loss/target, and live order/position lines with full order CRUD, plus trader education flows — driving a further 8% increase (∼20% combined uplift).
- Optimized the chart rendering pipeline for lag-free performance under continuous live tick streams.

FinSight AI — Native Android (Kotlin) & iOS (SwiftUI)

- Developed an AI-driven finance companion natively on both platforms, delivering stock fundamental/technical insights, an options strategy builder, and one-click trading.
- Implemented installed broker-app detection to personalize user journeys and onboarding.

Platform Engineering & Developer Experience

- Reverse-engineered Shorebird's OTA update internals and built a self-hosted code-push platform for Android and iOS, cutting hotfix delivery from days (store review) to minutes and saving ₹14L+ annually in licensing costs.
- Established CI/CD from zero — GitHub Actions auto-building 3 Android flavors, plus single-command shell scripts producing Android and iOS builds with automated Slack distribution — eliminating manual release steps.
- Set up Appium-based E2E automation for the QA team; enforced code health via custom lint rules and post-release `dart fix` passes.
- Engineered and open-sourced cross-platform plugins (millisecond-precision internet-speed monitoring, Android pinned shortcuts) on pub.dev.
- Mentored 2 junior engineers and drove knowledge sharing across the mobile team.

Software Developer 02/2021 – 03/2024

Timemarks Examiner Pvt. Ltd. *Jaipur, India*

- Joined as an early engineer at a bootstrapped EdTech startup; led 4 interns and contributed to system design and feature roadmaps across 6 products.

Studyem — EdTech LMS Mobile App (Flutter)

- Built a white-label LMS deployed for ∼5 client institutes serving 1,000+ students, using Flutter flavors and multi-environment pipelines for parallel client releases from a single codebase.
- Developed a WhatsApp-style real-time messaging system on RabbitMQ with live video calling and a Firebase Realtime Database–backed collaborative whiteboard for virtual classrooms.
- Launched a real-time quiz platform sustaining ∼400 peak concurrent users with live score synchronization.
- Reduced API usage by 70% through SQLite-based local caching, significantly improving responsiveness on low-end devices.
- Integrated Razorpay payments and shipped an AI chatbot to strengthen student engagement.

Studyem Web — Flutter Web PWA

- Shipped the LMS as an installable Progressive Web App with white-label theming, extending the platform to desktop and browser users from the same Flutter codebase.

Timevictor — Edu-Gaming Platform

- Developed a fantasy-style educational gaming product with real-time contest mechanics, integrated end-to-end with backend services.

Buckrate — Livestock Marketplace (Flutter Web)

- Created a Flutter Web marketplace for livestock trading featuring an AI-powered weight estimator built on image segmentation with custom-trained models.

WhatsApp Commerce Bot (Python, WhatsApp API)

- Built a WhatsApp automation bot using pywa and Flask, enabling conversational listing, enquiry, and engagement flows directly inside WhatsApp.

Projects

Libgen (600+ Downloads, 150K+ MAU) | *Flutter, Kotlin, JavaScript, Web Scraping* play.google

- Scaled a solo-built book search and reading platform to 600+ downloads and 150K+ monthly active users.
- Implemented multi-source data scraping and aggregation pipelines; monetized via LevelPlay ad bidding and RevenueCat in-app purchases.

Smooth Chucker — HTTP Inspector | *Flutter, Isolates, Material 3* pub.dev

- Built an in-app HTTP(S) request inspector with isolate-based background processing for zero UI jank, interceptors for dio, chopper, and http, and advanced search by API, method, and status code.

Raksha — Emergency SOS Band | *Flutter, IoT, ESP32, Firebase* IIIT.Surat

- Created an ESP32-powered wearable safety band paired with a Flutter app; a double-press gesture triggers SOS alerts with real-time location sharing via Google Maps.

MBM E-learning (15K+ Downloads) | *Flutter, Firebase* play.google

- Developed a branch- and semester-personalized academic resource app for MBM University students.

Open Source & Technical Writing

- Published **11 Flutter/Dart packages** on pub.dev (publisher lkrjangid.tech, scoring up to 150/160 pub points): `network_speed`, `smooth_chucker`, `curl_request_parser` (parses 200+ curl options into structured requests and generates Dart HTTP code), `rar` (Android/iOS/macOS/Web archive handling), `pinned_shortcuts`, comic-archive reader, `global_context_menu`, and more.
- Author of **FlutDev** (flutdev.blogspot.com) — 125+ articles on Flutter/Dart internals, including a 4-part deep dive dissecting Shorebird's OTA patching engine (bidiff algorithm, zstd compression, `updater.rs`).

Achievements

- Winner — Incubation & Funding Round, IIIT Surat, for Raksha (IoT SOS wearable).
- Hacktoberfest 2020 & 2021 open-source contributor.
- 600K+ cumulative downloads across self-published Play Store applications.

Education

MBM University Jodhpur, Rajasthan
Bachelor of Engineering (Electrical) — CGPA: 8.28 *2019 – 2023*

Uttaranchal University Dehradun, Uttarakhand
Master of Computer Applications (MCA) — Pursuing *2024 – 2026*
